

WATER DISTRICT 34
P.O. BOX 53
MACKAY, IDAHO 83251

November 26, 2007

Mr. Karl Dreher
322 Front Street
P.O. Box 83720
Boise, Idaho 83720

RECEIVED
FEB 07 2008
Department of Water Resources
Eastern Region

Dear Mr. Dreher:

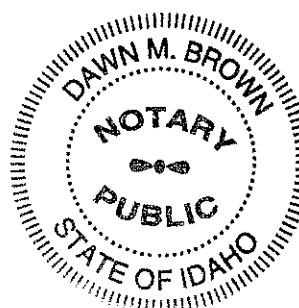

The following pages contain the annual report of the distribution of water for the Big Lost River, From November 1, 2006 to October 31, 2007

The Authority to distribute water using water rights in the Basin 34 Directors Report was provided by the Memorandum decision and order granting the Department of Water Resources' motion for interim Administration with Limitation, or decrees issued by the SRBA court.

Very truly yours,

Robert W. Shaffer

Robert Shaffer
Watermaster
District #34-Big Lost River

Dawn Brown
Notary Public
Residing at Mackay, Idaho
Commission expires 10/16/2012

Water District #34
Summary of Annual Report for 2007

November 20, 2007

It was a drastic change for Irrigators in Water District #34 starting the year with a NRCS snow pack estimate of 25% of average on May 1st 2007 after 2005 & 2006 being such good years. The warm dry winter left the valley floor with almost no snow cover all winter.

The Howell gauging station in 2006 peaked at 5010cfs on May 21st and in 2007 peaked at 1070cfs on May 13th.

Antelope started running and connecting with the Big Lost River in late February and continued to do so until May 18th when a futile call was made on it. After disconnecting from the river 7-1-1904 rights were filled until the 4th of June when the creek started dropping and rights were reduced to 9-3-1888. By June 26th the 1883,s were on and dropped to 5-1-1880 on July 5th, 9-30-1879 on August 18. On August 27th the holders of the 1879 rights agreed to allow later rights upstream to be filled due to low flows and lack of beneficial use. Only a few 1884 and 1885 rights were able to divert from the low creek flow and continued to do so for the remainder of the season.

Flows on the main Big Lost River were not much better with the Howell gauging station (21 miles NW of Mackay) only exceeding 1000 cfs for one day. The river administratively connected going over 750 cfs for 3 days on May 14 and disconnected 12 days later when it went below 450cfs for 3 days. The river then held pretty steady and all rights were satisfied above the reservoir that could get water out of the low river until the end of July when a decree date of 5-1-1905 was called. The flows slowly tapered off to August 21 when only the 6-1-1894 decrees could be filled at the Chilly, Neilsen, and Howell Diversions off the Big Lost River for the remainder of the season. From August 21st to September 23rd flows at the Howell Gauge were below 80cfs daily.

The Mackay Reservoir started the 2007 irrigation season at 88% of capacity after being drained in the fall of 2006 for repairs. With the combination of the minimum stream flow, rising water below Mackay Reservoir, and Antelope Creek the Big Lost River flows reached about half way between Moore and Arco all winter and spring before sinking.

The natural flow water below Mackay Reservoir on May 1st was 134cfs and reached 522cfs on May 14th and stayed around 500cfs for about 8 days ending the month at 277cfs. With the river channel being soaked up this allowed the decrees to be called as high as 1-1-1892 and tapering down to 7-17-1886 by the end of May. June was very similar to May starting at 297cfs, peaking on June 12th at 500cfs and ending at 212cfs, decrees started at 5-12-1886, peaked at 3-13-1887, and ended the month at 5-15-1885. July started at 185cfs, peaked at 200cfs and ended at 191cfs. July's decree dates started with 10-12-1884 dropping to 9-14-1884. The rest of the irrigation season

stayed steady with flows between 165cfs and 210cfs with the lowest decree date called being 5-31-1884 in mid September and the high of 10-12-1884 for October.

The gauging station at Leslie (USGS No.13130500) that was set up in 2006 on the US Highway 93 Bridge was moved to the bridge on Houston Road near Leslie in 2007 where the historical data and legal location as described in IDAPA 37.03.12 Water Distribution Rules for Water District 34.

The large amount of recharge done in 2005 and 2006 I believe made the difference in surviving the 2007 irrigation season. Groundwater levels in the Moore area raised 40 to 60 feet by spring of 2007 from the depletion of the drought years of the early 2000's. Sub water standing in low areas and springs starting to run again around the Darlington area in late 2006 probably made water delivery in late 2007 possible.

Robert W. Shaffer

Robert W. Shaffer

Watermaster
Water District #34

**Clarification of Flow Data
For
Gauging Stations**

Reported flows in the attached tables for gauging stations below the Moore Diversion and Arco-Munsey Diversion Canal were Dry for season 2007.

The USGS tables titled station number 13120500 Big Lost River at Howell Ranch, Mackay Reservoir (or the 2B gage) and Station number 13132500 Big Lost River NR Arco include data and are the final data prepared by the USGS for it's gauging stations located north of the Mackay Reservoir, below Mackay Reservoir and four miles Southeast of Arco, Respectively.

Flow reported for the new gauging station USGS #133050000 on Big Lost river bridge at Leslie, Located on Houston Road is being developed by Idaho Power where the river was Metered in prior years. This is the first year it was in place.
